Presentation 4.2 – JSON

Instructions
The presentations created in this course will be added to your personal portfolio
(username.github.io).

1. Create a new HTML page and name it "yourLastName-json-apis"
2. Add the HTML page to your yourLastName.github.io/web-420 directory
3. The HTML page must include
   a. Styling to mirror the index HTML page (base css styles)
   b. A selectable link back to the index.html page
   c. An HTML element for mp4 videos (<video>)
4. Convert the presentation to an mp4 and reference it from the <video> tag
5. Add the mp4 to your yourLastName.github.io/restful-api-presentations directory

Video Example:

```
<div class="card">
   <div class="card-body">
      <video controls autoplay reload="none" style="width:1000px;">
         <source src="../restful-api-presentations/test-presentation.mp4" type="video/mp4" />
      </video>
   </div>
</div>
```

As a reminder, the goal is to have a menu in your index.html page with links to the presentations
created throughout this course. The presentation must be in their own page with bi-directional
navigation. Be creative and personalize the presentations and HTML pages.
